

FOR SCIENCE TEACHERS & SCIENCE ENTHUSIASTS

Throughout the year, we give our best to our students. There is hardly any time to breathe and reflect. Like students, we also look forward to summer vacations. It is the ideal time to take a break from routine activities, attend to pending matters, and rejuvenate ourselves. This long vacation also offers an excellent chance to revisit our goals, strengthen our teaching skills and prepare for the next academic session. At Eklavya, we understand these concerns and that's why we have been conducting the summer science workshops.

16 - 21 June, 2025

SUMMER SCIENCE WORKSHOP

Join us for a residential workshop that offers exciting opportunities for...

Hands-on investigations

Brushing up conceptual understanding

Sharpening experimental skills

Engaging discussions

... with peers and an eclectic resource group from across the country.

The sessions will be conducted mostly in Hindi and pitched at middle and high school levels. The topics will have curricular links, but more importantly they will provide opportunities to understand the process and nature of science. So gear up for enriching sessions on -

- Discovery of Gases
- Force, Momentum and Energy
- Cell Division
- Current Electricity

Building perspectives on science education is another area that needs our attention to advance our professional faculties, so we have included interactive sessions towards this too.

Not to mention to the old timers, the main attraction of these residential workshops has been the sessions on investigatory projects, in which participants conduct investigations of their own questions and experience the inquiry firsthand. This year too, sufficient time is allotted for these sessions.

WORKSHOP BY

Eklavya Foundation

Jamn Lal Bajaj Parisar,
Jatkhedi, Bhopal, M.P

The workshop fee to cover various expenses is INR 15,000/- per participant. Since we have limited seats, please confirm your participation as soon as possible and deposit the fee by 15 June 2025.
